

Simplify drain-up piping installation

DSH-UP™ drain-up hose kit makes it easy to install drain-up piping on indoor commercial AC systems. It eliminates piecing together PVC with multiple adhesive connections, and the risk of water leakage from cement failure. DSH-UP features a flexible insulated drain hose with pre-connected hose fittings that quickly connect to PVC pipes with just a hose band, reducing installation time and the risk of condensation.

TECH INFO

DSH-UP
Advantages:

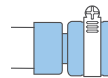

- Designed exclusively for drain-up piping
- Flexibility makes it easy to adjust and position
- Hose is pre-insulated for faster installation
- Pre-connected hose fittings eliminate use of cement or adhesives
- Design reduces risk of water leakage
- Transparent fittings assure a secure fit and water-flow check
- Water leakage check-sheet adds a level of ongoing awareness

FITTING TYPES

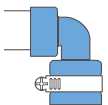

- Pre-connected hose with fittings
- No cement or adhesives needed
- Exclusive insulation technology that decreases on-site insulation work and reduce risks of condensation after installation.
- Transparent fittings
- Water leakage check sheet
- Material
 - Coupling Joint: PVC
 - Hose Band: SUS
 - Thermal Insulation Cover: Foam PE
 - Thermal Insulation Adhesive Tape: Foam PE
 - Thermal insulated drain house inner/outer layer: PVC
 - Thermal insulated drain house middle layer: Foam PE
